

## CASE HISTORY

ANZ: G0001

### Application

A Melbourne based OEM trailer manufacturer for the Caravan and RV industry is renowned for producing high quality, durable trailers which can withstand the tough rugged conditions.

The caravan chassis is manufactured using OneSteel DuraGal® Steel Tubing which is welded together, protected and top coated.

Three elements were identified as paramount to the success of his business.

1. The added durability of the trailer.
2. The consistency in appearance of the top coat & a bright new steel finish.
3. Quick drying time between coats.

### Solution

Following an initial trial period, Galmet DuraGal® was found to best meet all three requirements.

1. Galmet DuraGal® **provides a high level of corrosion protection.** Applying the coating immediately once the structure was welded provided even better results.
2. Galmet DuraGal® is **the recognised product for the top coating of OneSteel DuraGal® steel.** It can be sprayed straight from the 20Ltr. drum giving an even top coat finish.
3. Galmet DuraGal® was found to have a **faster drying time** than the previous product used and it **didn't require the use of a primer.**

### Benefits

Galmet DuraGal® became the **protective layer, primer and top coat all in one.** It significantly reduced the manufacturer's downtime and enabled them to apply 2 coats within just 30min.

**Fast Facts:** Galmet DuraGal® is:

- Self-priming and in this application eliminates the need of a primer coat – Downtime and overall painting time painting was reduced by 33%.
- Supplied in a bulk 20Ltr. steel drum which allows for a spray pump to be attached directly onto it. This simplifies the application process and provides an even top coat finish.
- An industry recognised leader in anti-corrosion protection of DuraGal tubing.

Pack Sizes: 350g, 1L, 4L, 20L
